**WHO WE ARE**

NC State's wind energy team

Windpack is a student-led team at NC State University competing in the Collegiate Wind Competition. Founded in 2025, we design, build, and test a complete wind turbine from scratch, and we build the full business case for a real wind farm alongside it.

The competition is run by the non-profit REpowering Schools and draws university teams from across the country. Our members come from across engineering and beyond, and no prior experience is required to join. Students learn fabrication, power electronics, controls, wind resource analysis, and the project management that ties it together.

**THREE SPECIALIZED TEAMS****Mechanical**

Blade aerodynamics, drivetrain, hub, and the structural design that has to survive the wind tunnel.

Electrical

Power electronics, generator integration, safety load circuits, and the control system.

Project Development

Site selection, wind resource assessment, environmental review, and financials.

**THE COMPETITION**

What we compete in

The Collegiate Wind Competition challenges student teams to design an innovative wind energy solution end to end. Teams are scored across three connected contests, so it takes engineers, analysts, and communicators working together. Windpack competes in all three.

Turbine Contest

Design and build a scale turbine, then prove it in the wind tunnel. Judged on power performance, control, durability, and a full technical design report.

Project Development

Plan a real wind farm: site selection, wind resource assessment, environmental and community review, financial modeling, and a complete development proposal.

Connection Creation

Engage the community and industry through outreach, sharing the team's work and building support for wind energy beyond campus.

Our first season

Windpack competed at nationals in May 2026, presenting to industry judges, running the turbine, and defending a full project development plan in our debut appearance.

**WHERE IT GOES**

How your support is used

Windpack is funded almost entirely by sponsorship. Every contribution, financial or in-kind, goes directly into the team: the parts we machine, the equipment we test on, and getting students to the national competition.

Materials & fabrication

Composites, filament, raw stock, and electronics for every prototype and revision.

\$X,XXX**Tools & equipment**

Test rigs, sensors, and shop equipment so the team can build and validate in-house.

\$X,XXX**Travel to nationals**

Registration, transport, and lodging to get the full team to the competition.

\$X,XXX**Outreach & operations**

Community events, printing, and the day-to-day costs of running the team.

\$X,XXX**Estimated season total****\$XX,XXX**

In-kind support counts too: materials, machining time, components, and software licenses.

**TALENT PIPELINE**

Where our members go

Sponsoring Windpack puts your brand in front of students who are already doing the work. Our members graduate with hands-on experience in fabrication, power electronics, controls, and energy project development, and they go on to roles across the energy and technology industry.

Members of our team have gone on to work at:

Room to grow

Room to grow

Room to grow

Room to grow

Company names reflect where team members have gone to work. This list grows every year.

WHAT SPONSORS GET ACCESS TO**Recruiting access**

Resume book access and first look at members entering the workforce.

On-campus presence

Info sessions and lab visits with a team that already builds hardware.

Brand visibility

Logo on the turbine, apparel, competition banner, and windpack.club.

SPONSORSHIP LEVELS

Ways to partner

Levels can be met through financial or in-kind support. If none of these fit, reach out and we will tailor a partnership that works for your organization.

	Breeze \$250+ Supporter	Gust \$1,000+ Team Partner	Tailwind \$2,500+ Lead Sponsor
Logo on windpack.club	✓	✓	✓
Social media thank-you post	✓	✓	✓
End-of-season recap report	✓	✓	✓
Logo on team apparel	—	✓	✓
Logo on competition banner	—	✓	✓
Access to member resume book	—	✓	✓
Premium logo on the turbine	—	—	✓
Dedicated info session / lab visit	—	—	✓
First access at recruiting events	—	—	✓

- **Recruiting access** Gust and Tailwind sponsors receive our member resume book each semester.
- **Lab visits** Tailwind sponsors get a dedicated session with the team and a look at the build.
- **In-kind welcome** Materials, machining time, components, and software all count toward a level.

WINDPACK

LET'S BUILD SOMETHING

Partner with the Pack

Your support puts real tools in students' hands and sends NC State to the national stage. We would love to talk about what a partnership could look like.
